

STEEL LADDER CLAMP

THE FIRST COMPLETELY SAFE METHOD TO SECURE A STEEL LADDER

- Developed for safe and secure fixing of steel box section ladders to scaffolding.
- Totally secure and holds the ladder at the required angle.
- Much stronger and more durable than nylon ties or rope lashings.
- Very quick and easy to use. No special tools required. Tightens securely using a standard scaffold spanner.

- The ladder is held tightly and the clamp eliminates movement at the ladder base.
- Brings the ladders into the scaffolding inspection rules. No fittings can be moved once inspected and passed.
- Used in conjunction with the Presco Self-Closing Handrail Coupler, provides a completely safe scaffold access and exit package.

SAFETY NOTE: ALL LADDER CLAMPS MUST BE USED IN PAIRS
